

Like engaging and innovative instruction?

Geographic Information System (GIS) Summer Workshop of Hands-on Learning

Beginner Level for Teachers & Other Educators

GIS can reveal patterns, enhance understanding of topics such as community issues, watersheds, natural hazards, international treaty borders, migration paths, and many more.

This workshop will provide hands-on activities designed to introduce you to ArcGIS Online, an online GIS by Esri, the leader in GIS around the world. A GIS can be a powerful tool to help students visualize an issue and determine the data needed to solve a problem and analyze possible outcomes. You can use GIS as a tool to learn about; communities, history, business, climate, economic development, the environment, public health and a wide range of STEM and Social Studies curriculum topics. ArcGIS Online web maps foster deeper inquiry, span subjects, and support many modes of learning. This workshop will provide you with the skills to bring an EASY TO USE ONLINE GIS to your students and colleagues along with related APPS and Story Maps.

The GIS ConnectEd in Delaware workshops are funded in part, by a competitive grant program by Esri and in cooperation with the Delaware Technical Community College. The educators who secured the grant have designed a two-day workshop with a follow-up webinar to deliver training so participants can engage classroom students and other educators in meaningful activities in support of academic studies. Participants should expect to engage with the workshops for the full time period. The stipend depends on full participation of one of the workshops and is for Delaware Educators Only.
